# FUELLED TO EXCITE

**AT SUZUKI, WE'RE DRIVEN BY INNOVATION TO MAKE YOUR DRIVE THE BEST IT CAN BE.**

The Swift comes with a powerful and responsive 1.2 Dualjet petrol engine. This is complemented by an extremely light and compact Hybrid system, which comes as standard, adding efficiency without making driving any less fun. Clever or what?

It's our spirit of innovation that led us to our self-charging Hybrid system. It helps reduce CO<sub>2</sub> emissions and improve fuel efficiency\*, without the fuss of finding somewhere to charge your car. So, you get a few more miles in the tank, and a great driving experience.

Whether you choose the manual or CVT automatic option\*\*, the Swift will help you get the most fun out of every journey.

\*Compared to the equivalent outgoing model without hybrid and using the official WLTP combined fuel consumption and CO<sub>2</sub> emissions figures. \*\*Available on SZ-T and SZ5 models only.

# FULL TECH AHEAD

WE'RE ALWAYS LOOKING FOR WAYS TO MAKE YOUR JOURNEY MORE ENJOYABLE AND SAFER.

Modern life demands a modern car, which is why our advanced safety assistance comes as standard. That includes state-of-the-art collision mitigating systems, including Automated Emergency Braking, Lane Departure Prevention<sup>§</sup> and Blind Spot Monitor<sup>§</sup>. So, whatever your destination, you can drive with peace of mind, making your journey more enjoyable.

## ALLGRIP AUTO<sup>‡</sup>

As you know, the Swift's built to perform thanks to its compact frame and lightweight body design. To give you extra confidence in hazardous road conditions, choose the ALLGRIP AUTO 4-wheel Drive model<sup>‡</sup>. It uses a light and compact design that drives the front wheels most of the time for maximum efficiency, then automatically sends drive to the rear wheels for extra traction when it's needed like on wet or icy roads.

<sup>§</sup>Available on SZ5 models only. <sup>‡</sup>ALLGRIP 4-wheel Drive system is available as an option on SZ5 models only.

## DSBS<sup>\*\*</sup>

When moving, the Swift uses two sensors – a monocular camera and a laser sensor – to determine if there is a risk of collision with a forward vehicle or pedestrian. Upon detecting a potential collision, the car acts in any of the following three ways, depending on the situation.

## RBS<sup>\*\*\*</sup>

When moving, the Swift uses millimetre-wave radar to detect the vehicle in front. Upon detecting a potential collision, the car acts in any of the following four ways, depending on the situation.

## LANE DEPARTURE WARNING<sup>\*\*</sup>

At 37mph (UK) / 60km/h (ROI) or faster, the lane departure warning function is designed to predict the path of the vehicle and issue visual (display and indicator) and tactile (vibrating steering wheel) warnings to the driver.

## LANE DEPARTURE PREVENTION<sup>\*\*</sup>

This feature uses a monocular camera to detect the boundaries of the lane while the vehicle is travelling between 37mph and 100mph (UK) / 60 and 160km/h (ROI) (where permitted). If it determines that unintentional lane departure is likely, it automatically assists the driver via electric power steering system to keep the vehicle in its lane.

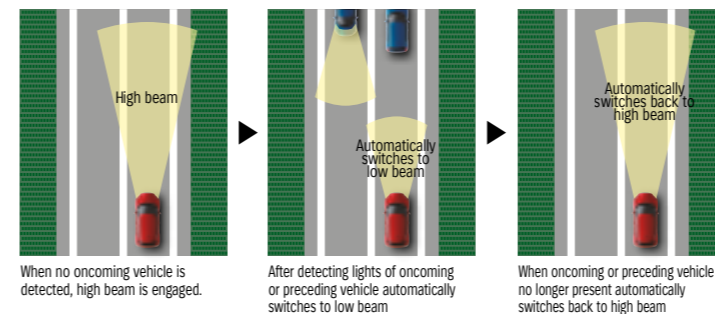

## WEAVING ALERT<sup>\*\*</sup>

At 37mph (UK) / 60km/h (ROI) or faster, the weaving alert is designed to calculate the driving pattern and issue audio and visual warnings if the vehicle is "wandering" due to driver drowsiness, etc. (standard on vehicles with a monocular camera and laser sensor).

## HIGH BEAM ASSIST<sup>†</sup>

At 25mph (UK) / 40km/h (ROI) or faster, high beam assist is designed to automatically switch the headlights between "High" and "Low", depending on the presence of other vehicles and the lighting environment.

<sup>†</sup>Available on SZ-T and SZ5 models only. <sup>\*\*</sup>Available on SZ-L models only. <sup>\*\*\*</sup>The driving assist function is limited to the ability of the monocular camera, laser sensor and millimetre-wave radar sensors to detect obstacles, lanes and traffic signs. It may not operate depending on the road surface or weather conditions. Please do not rely on this system alone to ensure safety and take responsibility for driving safely. For more details, ask your local dealer or refer to our official website. <sup>††</sup>The vehicle-to-vehicle distance varies depending on vehicle speed.

## ADAPTIVE CRUISE CONTROL

When there is a vehicle in front, the adaptive cruise control system uses millimetre-wave radar designed to gauge the distance to it and automatically maintains vehicle-to-vehicle distance in line with the choice of three possible settings<sup>\*\*</sup>. When there is no vehicle in front, the system maintains the speed (from 25mph and 100mph (UK) / 40km/h to 160km/h (ROI)) set by the driver.

## BLIND SPOT MONITOR (BSM)<sup>\*\*</sup>

At 9mph (UK) / 15km/h (ROI) or faster, two rear mounted side radar sensors detect vehicles located in or approaching the rear blind spot to assist the driver. A warning LED icon illuminated in the relevant door mirrors alerts the driver, accompanied by a warning sound if the driver activates the turn signals to change lanes.

## TRAFFIC SIGN RECOGNITION<sup>\*\*</sup>

This system uses the monocular camera to monitor the road for traffic signs. When it detects road signs such as speed limits or no passing zones, it displays the sign on the meter display to help remind the driver which road signs the car has passed. When multiple signs are detected, a maximum of three signs can be displayed at once.

## REAR PARKING SENSOR<sup>†</sup>

Ultrasonic sensors in the bumper detect obstacles while the driver is reversing the car and warning sounds inform the driver of the distance to the obstacles.

## REAR CROSS TRAFFIC ALERT<sup>\*\*</sup>

At speeds of up to 5mph (UK) / 8 km/h (ROI) whilst in reverse, the vehicle uses two rear mounted side radar sensors to assist the driver by alerting them of approaching vehicles on either side of the vehicle when reversing out of car parking spaces. If a vehicle is detected, the driver is given both a visual alert on the multi information display and a warning sound alert. This assists the driver to manoeuvre more safely out of parking spaces where vision is obscured on either or both sides of the vehicle.
