During the 90s Le Tone had a major hit, "Joli Dragon", and devoted himself to music for 15 years before progressively moving towards illustrative art. Since 2011 his creations have been exhibited in famous places such as the Pompidou centre. An admirer of artists who know how to make the best use of colour, Le Tone confesses to having a weakness for black and white, which he uses to tell simple stories by using felt pen drawings in notebooks.

1948

The much-loved 2 CV is created as a "safe and economical vehicle, able to carry 4 people on-board and 50 kg of luggage". More than 5 million are made.

1955

Unveiled to a stunned public at the 1955 Paris Motor Show, DS takes futuristic design to new heights. Its stunning aerodynamic shape, created by Flaminio Bertone, earns it the nickname 'flying saucer'. Under the skin it's just as advanced.

1968

It's a golden age for light and agile vehicles like Ami 6, Dyane and Mehari, a unique design for all roads and multi-purpose use.

2017

2018 International Engine of the Year Award for PureTech 110 and 130 Petrol engines, in the 1L to 1.4L engines category. Awarded by the jury of the International Engine of the Year Awards, organised by the British magazine Engine Technology International.

## LATEST GENERATION ENGINES

Citroën C3 Aircross SUV offers you a wide range of economical and efficient engines, from the latest PureTech petrol to the refined BlueHDi diesel engines.

Details on [citroen.co.uk](http://citroen.co.uk)

## 4 EFFICIENT ENGINES

The latest PureTech petrol engines available on the Citroën C3 Aircross SUV provide a responsive and flexible drive. Choose from the turbocharged PureTech 110 and 130 versions, all specialise in reducing fuel consumption and CO<sub>2</sub> emissions further than ever before.

The super-efficient BlueHDi 100 diesel is one of the segment leading with technology that continuously minimises polluting engine emissions and complies with newly introduced Euro 6.2 standards. The technology consists of an exhaust system equipped with three pollution control systems: oxidation catalyst, additive particle filter and Selective Catalytic Reduction, which when combined drastically reduce emissions produced by the engine, included nitrogen oxides (NoX) and 99.9% of particles.

The EAT6 automatic gearbox, coupled to a Stop & Start system, is available with the Petrol PureTech 130, which further enhances the performance and driving experience, whilst optimising the gear changes and ratio to refine the consumption and CO<sub>2</sub> emissions. A 6-speed manual gearbox is available with the 110 S&S and 130 S&S engines as well as the BlueHDi 100 engine.

\*Figures shown are for comparison purposes only; you should only compare these fuel consumption and CO<sub>2</sub> figures with other cars tested using the same technical standard. The fuel consumption you achieve, and CO<sub>2</sub> produced, in real world conditions will depend upon a number of factors: including the accessories fitted (post registration), variations in weather, driving styles and vehicle load. There is a new test WLTP (Worldwide Harmonised Light Vehicles Test Procedure) used to measure fuel consumption and CO<sub>2</sub> figures. The CO<sub>2</sub> figures shown are NEDCeq (New European Driving Cycle Equivalent), calculated using an EC correlation tool which converts WLTP figures to NEDC. These NEDCeq figures are based on the outgoing test cycle and will be used to calculate tax for the first registration. CO<sub>2</sub> and fuel economy figures may vary according to wheel fitment and optional extras fitted.

TECHNICAL  
SPECIFICATION

\* Mirrors folded.  
\*\* With longitudinal roof bars.

All measurements are in millimetres.

<sup>1</sup>Figures shown are for comparison purposes and should only be compared to the fuel consumption and CO<sub>2</sub> values of other cars tested to the same technical standard. The fuel consumption achieved, and CO<sub>2</sub> produced, in real world conditions will depend upon a number of factors: (including but not limited to) the accessories fitted (pre and post registration), variations in weather, driving styles and vehicle load. The WLTP (Worldwide Harmonised Light Vehicles Test Procedure) is used to measure fuel consumption and CO<sub>2</sub> figures. These CO<sub>2</sub> figures are used to calculate the Vehicle Excise Duty (VED) for the first registration of the vehicle. The CO<sub>2</sub> figures display a range to reflect the highest value for the highest emitting version with all available options added, through to a minimum value to represent the lowest emitting version in standard specification.

CO<sub>2</sub> figures, P11D values, BIK% and MRRP pricing shown above are for a standard vehicle without any additional optional equipment. CO<sub>2</sub> figures are used to calculate Vehicle Excise Duty (VED) for the first registration of the vehicle and BIK%. The addition of optional extras could increase the certified CO<sub>2</sub> emission output. This in turn may affect the amount of VED payable upon registration, and, for company car drivers, the amount of Benefit in Kind (BIK) tax payable. For further information on CO<sub>2</sub> and pricing for vehicles with optional equipment, please visit <https://www.citroen.co.uk/configurator.html>

+ Figures shown are for comparison purposes and should only be compared to the fuel consumption and CO<sub>2</sub> values of other cars tested to the same technical standard. The fuel consumption achieved, and CO<sub>2</sub> produced, in real world conditions will depend upon a number of factors including, but not limited to: the accessories fitted (pre and post registration); variations in weather; driving styles and vehicle load. The WLTP (Worldwide Harmonised Light Vehicles Test Procedure) is used to measure fuel consumption and CO<sub>2</sub> figures

\* 'On the Road' MRRP includes registration plates and delivery to dealer (including VAT), 12 months' Vehicle Excise Duty and new vehicle registration fee of £55. Excludes fuel and insurance.

CO<sub>2</sub> figures, P11D values, BIK% and MRRP pricing shown above are for a standard vehicle without any additional optional equipment. CO<sub>2</sub> figures are used to calculate Vehicle Excise Duty (VED) for the first registration of the vehicle and BIK%. The addition of optional extras could increase the certified CO<sub>2</sub> emission output. This in turn may affect the amount of VED payable upon registration, and, for company car drivers, the amount of Benefit in Kind (BIK) tax payable. For further information on CO<sub>2</sub> and pricing for vehicles with optional equipment, please visit <https://www.citroen.co.uk/configurator.html>

+ Figures shown are for comparison purposes and should only be compared to the fuel consumption and CO<sub>2</sub> values of other cars tested to the same technical standard. The fuel consumption achieved, and CO<sub>2</sub> produced, in real world conditions will depend upon a number of factors including, but not limited to: the accessories fitted (pre and post registration); variations in weather; driving styles and vehicle load. The WLTP (Worldwide Harmonised Light Vehicles Test Procedure) is used to measure fuel consumption and CO<sub>2</sub> figures

\* ‘On the Road’ MRRP includes registration plates and delivery to dealer (including VAT), 12 months’ Vehicle Excise Duty and new vehicle registration fee of £55. Excludes fuel and insurance.

All information and prices correct at time of publication, but are subject to change at any time without prior notice (which may occur as a result of, but not limited to, any changes in legislation and/or any changes by the Government). Please see our Prices and Specifications brochures or contact your local Citroën dealer for the most up-to-date prices and specification details for all models.
